Education

Purdue University, West Lafayette, IN — May 2025

- Bachelor of Science in Computer Science — Cumulative GPA: 4.00/4.00
- Relevant Classes:
  Programming Tools, Problem Solving and Object-Oriented Programming, Foundations of Computer Science, Programming in C

Technical Skills

- C, Python, Java, Arduino IDE, MySQL, Python-SQL Connectivity

Work Experience

Summer Undergraduate Research Fellowship, Purdue University — May 2022 – Present

- I am working with Professor Aravind Machiry in the Department of Electrical and Computer Engineering on "Gamification of Security Education in Programming Courses".

Research Computing - Student Service Research Support Dev, Purdue University — March 2022 – May 2022

- My main duties include aiding in the collection and curation of data from Purdue's production computing clusters.

Club Experience

BoilerMake Executive Board UX Team — April 2022 – Present

- Part of the UX Team on the Executive Board of Purdue University's largest annual hackathon with over 500 participants.
- Work on planning events and logistics to enhance the user experience for the hackathon.

Launchpad — August 2022 – Present

- Mentoring incoming freshman in building a project to help them get them introduced to Computer Science.

Projects

Demographic Transition Model — January 2022

- Created for classifying the stage of the demographic transition model (DTM) for a particular country
- Built with focus on historical population trends of two demographic variables: the birth rate and death rate
- Programmed using Python

Learning Management System — November 2021 – December 2021

- Created a client-server-based Learning Management System Graphical User Interface for college coursework
- Consists of a password-based login system, allows teacher to create courses, quizzes, and students to attempt them and view scores
- Programmed using Java

Finance and Stock Based Web Application — May 2020 – August 2020

- Created to assist beginners in Stock Market by allowing them to practice Stock Trading before utilizing real money
- Enables people to monitor stock values
- Programmed using Python, HTML, CSS, JavaScript with Flask Web framework

Obstacle Avoiding Programmable Robotic Car — April 2020 – May 2020

- Constructed the complete framework of the car
- Programmed to scan objects in its surroundings and avoid and move in another direction
- Created using an Arduino Uno, attached to motor drive control board, in Arduino IDE

Project and Inventory Management System Graphical User Interface — February 2020 – March 2020

- Developed to help companies manage projects and streamline management of business
- Created using Python and database used SQLlite3

Programmable LED CUBE 4X4X4 — June 2019 – July 2019

- Created with the purpose to better explain topics of Maths and Physics such as matrices and different types of waves
- Devised the complete framework of the cube
- Programmed the LEDs with Arduino IDE to display different kinds of patterns
